                                                       This clone is contained in a DNA construct used to transform host plant cells for regulating the prodn. of the enzyme encoded by pTOM36. Plants such as apple, tomato and mango may be modified to produce e.g. sweeter fruit, novel flavour, modified colour or to have improved processing characteristics. The DNA construct pref. also comprises a constitutive or regulatory promoter, e.g. the CaMV 35S or poly-

```
This is the nucleotide sequence encoding the adenovirus Ad-36p fiber protein used in the method of the invention to determine if a person is suffering viral obesity. The method is used to determine whether obesity in a person has a viral basis. Ad-36p can be used as a basis of a vaccine to prevent viral-based obesity.
                                                                                                                                                                                                                                                                                                                                                                              Determining if obesity in a person is caused by Ad-36 virus - and providing the basis for treatment or prevention of obesity-causing, cholesterol reducing adanovirus, using the purified variant, Ad-36p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of the CDNA clone pTOM36 which is believed to encode a cytoplasmic protein of approximately 52000 daltons involved in the ripening of tomatces. The clone is 1069 bases long with an open reading frame of 271 codons. DNA homologous to pTOM36 homologous to brown to a construct that inhibits expression of genes with this construct have increased solids content and a higher content of reducing sugars, e.g. glucose and fructose. The fruit may be managoes, peaches, apples, pears, strawberries, bananas, transformed and case to the produced may be managoes, which are useful in the product of

Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin planents. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from
                                                                                                                                     DNA coding for aromatic acyl transferase - for transforming plants which produce anthocyanin pigments and thus altering colour tone, e.g. of flowers

                                                                                                                                                                                                                                                                                                                                                         Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourstions to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.

```
isolated from a melon ripe fruit cDNA library. MEL2 is not a full-length clone; it lacks the initiation codon for the amino terminus. The cDNA allows control of the ripening of fruit, especially melons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anther specific CDNA or genomic sequences can be used to identify and isolate anther specific promoters. The anther specific promoters can then be cloned into a recombinant construct and used to express the derologous genes. Preferred heterologous genes include Diptheria chryanthemi: T-urfil from cms-T maize mitochondrial genomes; the chryanthemi: T-urfil from cms-T maize mitochondrial genomes; the ciny machine gene from page Mu; the indole acetic acid-lysine from Bacillus thuringlensis Israeliensis. All of these genes when construct can anther tissue will result in the inability of the plant to produce viable pollen. Transformation of plants with such construct can produce transgenic, male sterile plants. Consents self pollination which hinders breeding and hybrid seeds as it

Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                          Aromatic acyl transferase; transformation; anthocyanin pigment; plants; acylation; colour; tone; colouration; colour change; Gentiana triflora; Petunia hybrida; Perilla ocimoides;

  054693
                        Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA coding for aromatic acyl transferase – for transforming plants which produce anthocyanin pigments and thus altering colour tone, e.g. of flowers

                                                 Anther specific cDNA or genomic sequences can be used to identify and isolate anther specific promoters. The anther specific promoters can then be cloned into a recombinant construct and used to express the terologous genes. Preferred heterologous genes include Diptheria chrysathemi: T-urfl3 from cms-T maize mitochondrial genomes; the cirysathemi: T-urfl3 from cms-T maize mitochondrial genomes; the cirysathemi: T-urfl3 from pseudomonas syringae and the Cyta toxin gene synthetase gene from pseudomonas syringae and the Cyta toxin gene cypressed in anther tissue will result in the inability of the cyprate to produce viable pollen. Transformation of plants with such male sterility is important in the production of plants with such male sterility is important in the production of hybrid seeds as it condiments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Dual method for producing male-sterile plants – comprises crossing 2 genetically transformed plants, useful for producing hybrid seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q58340 is an anther specific clone from Nicotiana tabacum. The ant32 promoter can be operably linked to, eg. T7 RNA polymerase gene or to GAL4/VPI fusion gene in order to produce male-sterile plants. The inventors claim that male-sterile plants finally produced can be used to increase hybrid vigour in plants, e.g. maize.

Sequence 6, Application US/09187050B

Patent No. 6043072

GENERAL INPORMATION:

APPLICANT: Croteau, Rodney B

APPLICANT: Hefner, Jerry

TITLE OF INVENTION: Synthase, And Methods of Use

FILE REFERENCE: WSUR12423

CURRENT APPLICATION UNUMBER: US/09/187,050B

CURRENT APPLICATION UNUMBER: US/09/187,050B

CURRENT APPLICATION UNUMBER: US/09/187,050B

CURRENT FILING DATE: 1998-11-05

NUMBER OF SEQ ID NOS: 34

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 6

LENGTH: 23

TYPE: DNA

ORGANISM: Artificial Sequence
FEATURE:

CHUER INCORPATION. Description of Artificial Security
Sequence 1, Application US/07598873 Patent No. 5254800

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (bases 1 to 227)
//note-wector: pBluescript II XR; Site_1: EcoRI; Site_2: AhoI; Root cDNA. The mRNA was isolated from entire roots of 8 day old 'williams' seedlings which were propagated on paper towels with distilled water. Stratagene's cDNA Synthesis Kit (catalog #200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA is hemimethylated. Stratagene's first-strand synthesis primer was used [GAGAGAGAGAGAGAGAGAGAGAGAGTG-18]. After second-strand synthesis, the cDNA were 'pollshed' with clone Pfu DNA polymerase, ligated to EcoRI adapters, and phosphorylated. The XhoI site within the first-strand synthesis primer was restricted by digestion with xhoI; all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that had been sequenced, and possess putative cDNA inserts. This library was constructed by Dr. Paul Keim & Virginia H. Coryell, Department of Biology, Box5640, Northern Arizona University, Flagstaff, Az 86011, Phone: 520-523-1078 (Dr. Paul Keim), 520-523-1372 (Virginia H. /note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: /note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhoI; The mRNA was isolated from roots of Glycine max 'Supernod' plants generously donated by Dr. Gary Stacey. The seedlings were innoculated with Bradyrhizoblum Japonicus, strain USDA10 priot to harvest. Strategene's cDNA synthesis Kit (catalog number 200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A,C, or G) was added to the 3' end of the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA polymerase, ligated to EcoRI adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               est@watson.wustl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               digestion with XhOI; all XhOI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhOI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=25). This library was constructed by Dr. Paul Kelm and Dr. Virginia 65 a 37 c 65 g 77 t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                65

The mRNA sources were 1) 7 day germinated eticlated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and slilques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dT primed cDNA. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Waterston, R. and Wilson, R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note-"Vector: pSPORT1; Site_1: Not I; Site_2: Sal I; This cDNA library was constructed from mRNA isolated from very young cotyledons (20-50mgs fresh weight) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a Not I restriction site. Sal I linker adapters were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The cDNA fragments were directionally cloned into the Not I -Sal I restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 þ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /tissue_type="very young cotyledons of greenhouse grown

Complementary DNA was synthesized from mRNA using plants. Complementary DNA was synthesized from mRNA using ligated to the blunt-ended cDNA fragments followed by direction with EcoRI and HindIII. The cDNA fragments were digestion with EcoRI and HindIII. The cDNA fragments site of the pT/T3-Pac vector. The ligated cDNA fragments library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."

                                                                                                                                               nitrogen-rich medium for 21 days. Three days before inoculation with Sinorhizobium meliloti, the medium was replaced by N-free medium. Root nodules (+ short adjacent root segments) were harvested 4 days post inoculation. CDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into Uni-zap XR vector from Stratagene and packaged using Gigapack Gold packaging extracts. Plasmids containing cDNA inserts were mass-systed from there is the containing cDNA inserts were

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total sccre distribution.

The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA coding for aromatic acyl transferase - which produce anthocyanin pigments and thus e.g. of flowers

                                                                                                                                                                                                                                                                               Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.

                                                                Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T97308-T97313. NOTE: This sequence is supposed to cross reference with the protein described in W04727, however there are so many discrepancies between the polypeptide decoded from this sequence and the polypeptide decoded from the specification and described in W04727 that the indexer decided not to cross reference the two.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1282

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in 737308-737313.

DNA coding for aromatic acyl transferase - which produce anthocyanin pigments and thus e.g. of flowers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tone changes and allowing new colourations to be produced specific DNA sequences encoding aromatic acyl transferase different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour transferase acylates the pigments in the flower resulting in colour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ashikari T, Fujiwara H, Fuk
